WASTEWATER CALCULATIONS

History Based Consumption

In order to calculate a wastewater bill, single family residential customers must know their History Based Consumption (HBC). The HBC is the average amount of water that a residential customer uses between November and February. This value will differ between customers. Every March, the HBC will update with the new average consumption.

Calculate HBC

Water Usage	November	6,000
	December	3,000
	January	3,000
	February	<u>+4,000</u>
Consumption		16,000 ÷ 4 months
Nov-Feb Average		4,000 gallons

Volume on Bill 4 units*

* If you are a new resident, an HBC of 7 units is assigned for the first year.

Calculate Bill

Volume on Bill	4
Volume Rate	<u>× \$3.71</u>
Volume Charge	\$14.84
Base Charge	<u>+ \$20.17</u>
Total Bill	\$35.01
